

Energy Saving Policy

The Company operates the expressway and the mass rapid transit businesses with a strong commitment to its ongoing responsibility for energy conservation. The Company has therefore developed an energy management system to ensure the highest efficiency in energy consumption and to ensure a consistency across all operations. The operational guidelines are as follows:

1. To establish energy conservation as an integral part of the Company's operations.
2. To manage energy conservation in a manner appropriate to the nature and volume of energy consumption; and to develop an energy management system suited to the business context, technologies employed, and best operational practices to continuously improve energy efficiency.
3. To ensure strict compliance with all applicable laws and other requirements related to energy conservation and energy management.
4. To set targets, and to review and continuously improve the energy management plan for greater efficiency, while also actively communicating with employees and stakeholders to ensure their understanding and correct implementation.
5. To allocate necessary resources to drive the implementation of energy management measures to successfully and efficiently achieve the established targets.

This policy is considered a part of the Company's operations, and it is the responsibility of all employees and contractors to implement it diligently and consistently to ensure continuous and sustainable energy conservation.
